

Asset Management for Leaders course educates executive leadership on the business importance and value of reliable operations and a proactive asset management. The 2-hour workshop aligns executive leadership, reliability, and maintenance team members with a common baseline of knowledge and terminology regarding asset management best practices. Participants will explore the business case for asset management excellence, including its impact on operational performance and long-term value creation.

The goal of the course is to strengthen executive leadership support for asset management best practice implementation and to gain insight into industry standards and benchmarks for reliability and maintenance programs. Through a review of asset management maturity models and benchmarking case studies—leaders will gain insights into successful implementation approaches. Key performance indicators will be examined with an emphasis on leading and lagging metrics, and participants will engage in a practical dialogue on leadership behaviors and coaching techniques that drive maturity advancement and sustainable results.

Course Information

Each course includes a comprehensive learning materials. All students completing a class at Life Cycle Institute will receive a certificate of completion awarding 0.2 CEUs.

Who Will Benefit
